

# **PD<sup>2</sup> Adapter v2.7 Capabilities Review**

**Mike Stopper  
Kim Jones**

**CACI**

- **Schedule**
  - Initial delivery October 29, 2008
  - Release Candidate 02 delivered February 9, 2009 to correct issues identified during Government Software Acceptance Test (SAT)

- INTADPT0017 Version identifier in outbound XML
  - Due to changes in the PD<sup>2</sup> Adapter DTDs between v2.5 and v2.7, a version identifier was added to the DTD so external systems will be able to recognize the PD<sup>2</sup> Adapter version from which the XML originated
- INTADPT0019 Add New Document Types to PD<sup>2</sup> Adapter
  - Added the PD2\_AwardAFIF2 and PD2\_AwardModAFIF2 Document Types

- ERP IC processes inbound PRs so that they are inserted, generated, and approved in PD<sup>2</sup>
  - XML (TnDocType = PD2\_Pr\_Erp) must be submitted to a Broker service in order for the Broker to recognize the XML
  - To generate, the prGenerate parameter must be set to “True” and ASF server must be running. Otherwise, PR can be manually generated in PD<sup>2</sup>
  - To approve, an ERP-specific Approval Template must be available in PD<sup>2</sup>
  - TN Status is given as response to the status back to the sending system (if configured)
- Various configuration parameters available (i.e., the message that is returned upon success or failure)
- ERP IC is not required for all sites and can be used as deemed appropriate

## Preview of What's Coming in v2.8

- External Award Transfer
  - Ability to receive an award from another database as an external award
  - Automatic updates of external award if contract is modified in originating site
- Support for My webMethods Server
  - Portal platform for webMethods Product Suite
  - Provides browser-based User Interface (UI) for administration and transaction monitoring
